ACIBADEM

Acıbadem Hosp. Maslak
Radiology Report
Report No :4531209940

Patient Name:	KHATİA OZASHVİLİ	**Patient No:**	42680748
Age / Gender:	34 Years - 3 Months / Female	**Turkish ID/Passport No:**	21AA46652
LOINC Code:		**Imaging Date:**	13.10.2026 12:18:20
Access No:	TOL4531209940	**Approval Date:**	14.10.2026 15:37:40
Hospital License No:	391	**Department:**	Radiology
Ordering Physician:	A. Erdem Kılavuz	**Physician:**	Dr. Müjgan Orman - 116998 /
Order Date:	13.10.2026 10:21:53		
Transfer Date:	13.10.2026 12:18:20		

Clinical Info

Diagnosis
Indication:
Thin-section imaging up to the carina. Possible tracheal stenosis. The patient may be pregnant.

Method

Imaging	CT, Neck (Non-contrast)	Given Agent	
Device Name/Brand/Model		Amount of Agent	
Received Dose	466	Administration Method	
Imaging Site		kVp	140
mA		Reason for Repeat Imaging	
Amount of Discarded Dose			

PARANASAL SINUS CT + NECK CT EXAMINATION:

Technique: A spectral non-contrast examination was performed using the Siemens NAEOTOM Alpha CT with a photon-counting detector (QuantaMax).

Indication:

Findings:

A mild S-shaped deviation of the nasal septum was observed.

The right inferior turbinate is hypertrophic, and the inferior meatus is narrowed secondary to this.

The frontal sinuses and recesses are well aerated. The anterior and posterior ethmoid cells are well aerated bilaterally.

Aeration of the sphenoid sinus is normal.

Mucosal thickening and secretion are observed within the left maxillary sinus.

There is a millimetric mucus retention cyst within the right maxillary sinus.

The nasopharyngeal air column is patent, and the frontal recesses are symmetrical.

The integrity of the bony structures has been preserved.

Brain CT:

No masses or pathologically enlarged lymph nodes are observed.

The pharyngeal wall structures and parapharyngeal fatty spaces are normal.

Both submandibular and sublingual glands and parotid glands are normal.

No pathology is detected in the segment of the esophagus that is examined.

The larynx appears normal: the piriform sinuses and valleculae are open. Vocal cords appear normal. Cartilage structures look normal.

Thyroid gland looks normal.

The vascular structures, muscles and bone structures within the examination area are normal.

IMPRESSION:

Mild S-shaped deviation of the nasal septum

The right inferior turbinate is hypertrophic, and the inferior meatus is narrowed secondary to this.

Mucosal thickening and secretion are observed within the left maxillary sinus. A millimetric mucous retention cyst is present in the right maxillary sinus.

Regards;
Dr. Müjgan Orman
